

TURBINATOR: WATER DRIVEN FOAM PROPORTIONER

TURBINATOR

Foam extinguishing

The water driven foam proportioner that is designed to accurately mix extinguishing foam concentrate with freshwater or seawater. The Turbinator is available with capacities to suit most applications and can be used in fixed systems or as a mobile unit such as fire trucks, trailers and hand-portable use.

The Turbinator consists of two main parts: a water driven engine and a foam concentrate pump. The motor and pump are connected and integrated in a compact housing. The unique design of the Turbinator makes the device self-priming. The foam pump develops a strong suction lift, resulting in a reliable and uninterrupted supply of extinguishing foam concentrate.

You can find more information about the Turbinator on our website: www.knowsleysk.co.uk
