

CESAFLEX

DHP-5

Cesaflex

The Cesaflex DHP fire extinguishing system is a compact fire extinguishing system designed for the automatic extinguishing of small, closed objects. The Cesaflex DHP system is filled with clean CO2 and extinguishes fires quickly and effectively without damaging the area. The extinguishing gas is stored under high pressure in the extinguishing gas cylinder. The special DHP extinguisher valve reduces the pressure of the gas before use.

After installation, the system works completely autonomously. In the event of a fire, the detection / extinguishing line bursts and the flames are extinguished by the released extinguishing gas. The Cesaflex DHP system does not have a manual control. The condition of the system can be easily checked at any time with the manometer supplied. In addition, this automatic extinguishing system can be equipped with a pressure switch for reporting a fire alarm or switching off machines and installations.

The Cesaflex DHP is available as a 2 kilogram and 5 kilogram CO2 version.

- Automatic detection and extinguishing.
- Heat activated, no risk of false alarms or unwanted system release.
- Overpressure protection that blows off gas in case of too high a temperature.
- Pressure indicator to check the operating pressure of the system regularly.

SPECIFICATIONS

Product group	Compact extinguishing system
Product family	Cesaflex
Article Number	600254
Object type	Electronics panel, Data room
Extinguishing agent	CO2
Contents (weight)	5 kg
Firerating class B	Yes
